

## Absolute Values & Inequalities

LT: I can isolate a variable, manipulating equations with more than one variable (absolute values, inequalities).

Simplify the expressions.

1.  $|-5|$

2.  $|18|$

3.  $|-a|$

Solve each equation.

4.  $|x - 2| = 10$

8.  $|2 - c| + 3 = 8$

5.  $3|a| = 21$

9.  $6|2(x - 2)| = 48$

6.  $|-4b| = 16$

10.  $|x - 3| + 7 = 8(x - 1)$

7.  $|x| - 6 = 14$

Graph the functions on the same graph. Label each graph.

11.  $f(x) = |x|$

x	f(x)
-3	
-2	
-1	
0	
1	
2	
3	

12.  $g(x) = |x| + 1$

x	g(x)
-3	
-2	
-1	
0	
1	
2	
3	

13.  $h(x) = |x - 2| + 1$

x	h(x)
-3	
-1	
0	
1	
3	
5	
6	

## Inequalities

REMEMBER:

When dividing by a negative number or multiplying by a negative number, then the inequality sign flips.

Example:

$$\begin{aligned} &5 > 2 \text{ [5 is greater than 2]} \\ (-1)5 < (-1)2 &\text{ [multiply both sides by -1, and flip the sign]} \\ -5 < -2 &\text{ [-5 is less than -2, which is a true statement]} \end{aligned}$$

Solve each inequality.

1.  $x + 2 \geq 5$

5.  $3x - 6(x - 1) \geq 9$

2.  $3x + 1 < 12$

6.  $-11x + 3 - 4x - 4 \leq 2x$

3.  $2(a - 2) \leq -2$

7.  $-4y > y + 25$

4.  $-5(y + 5) > 15$

8.  $18 + r \leq 6 - 3(r + 2)$

Graph each inequality.

9.  $y < -3x + 4$

11.  $y > \frac{3}{4}x + 2$

10.  $y \geq -\frac{1}{3}x - 2$

12.  $y \leq 2x + 5$
